For immediate release

# **Osmium-Institutes all over the world are creating various new job opportunities**

*MUNICH, Germany, 12<sup>th</sup> of November, 2018 – With growth of the Osmium Business all around the globe new jobs and opportunities for scientific staff, wholesale partners and retail affiliates as well as social media experts are arising. With the main Institute in Germany expanding its global outreach, things are now also starting to take off in many countries worldwide. Throughout the countries, partners with the respective backgrounds are sought who feel confident in establishing a wholesale business in their region. There are no prerequisites to fulfil, as the partners are trained by the institutes free of charge.*

## **Certification of Osmium**

Following the example of the German Osmium-Institute (functioning as the global headquarters for all Osmium-Institutes) partners all over the world are not only responsible for identifying and analyzing markets for metals. Above all, they are organizing the development of trading structures for the last precious metal in their region.

A State Institute Partners who recently joined the team says: *"Individuals who think they are capable of supporting trade with the rarest precious metal in the world and see this as their mission are called upon to apply. In view of the current price developments, our most urgent goal is to promote trading in osmium. The money needs to be earned when the market is ready."*

Training and education are free of charge for the prospective wholesale partners. The only requirement is, next to a promising background, a clear joint effort to build a market that could hardly be more interesting.

Studies and certification will continue to be carried out at the global headquarters in Germany.

The special appeal for the new employees and freelancers is the work with a metal that is surrounded by a myth that no other metal has ever had. Osmium is the rarest of the precious metals, but at the same time also the "most beautiful", as it even outperforms diamonds when held in the sun with its blueish-whitish lustre emanating from its crystalline surface.

As it happened in Germany and other countries before, in the first weeks, interested retailers and journalists worldwide are asked to reach out to their local Osmium-Institute (contact data below). They will learn all the key facts about the last precious metal and the International Osmium Database. These certified partners will answer questions about osmium internationally to investors, journalists, scientists, jewellers and other interested parties. Neutrality and information are the team's credo.

Quotation Ingo Wolf, Director of the German Osmium Institute: *"We started in Germany, learned a lot and now have smoothed and perfected all processes. This knowledge can now be used in various countries. We are very much looking forward to the new challenges and work around the clock under the banner of the eighth precious metal."*

In every country, the core team is supplemented by employees and freelancers in the areas of social media, photography, IT and science who provide additional support and advice. Anyone who wants to work on a new and exciting market is highly welcome to present his skills and himself. We are mainly looking for journalistically experienced employees and partners who are interested in building up a wholesale structure.
